StoryBoard Video for Presentation

1. Market Needs
2. Introduce Product
3. Delve into specifics

Market Needs/Problem

- No automation companies (Manually carrying stuff)
  - No cohesion - Developers, Testers and Operations teams are disconnected
  - Slow once a month/year deployment
- Half automation companies (Put on conveyor belt, person take it off)
  - Custom pipelines, often hard to reuse/apply to different projects
- Companies have to put tools together to build custom pipeline system
  - Expensive to have outside companies do it for you

Introduce Product

- Address Problem (Man submits on computer - zoom in)
    - Simple setup
    - Integrates smoothly with AWS
    - Uses Docker, Jenkins, and Github (other code repositories)
    - Command line tool (We gonna include this?)
    - Works with different software products: Web Apps, Mobile Apps, Custom Software Programs

Delve into specifics

- Project Statement
  - Configurable as Code
- Open Source
  - Can fork and create your own
  - FREE!!
- AWS, Github, Jenkins Integration Specifics
  - Grabbing code, build and test on Jenkins Server
  - Deploys to AWS
